Large Chamber Gauges for Easy Level Reading of Boiling Liquid

Series L Large Chamber Gauges are designed to give an accurate liquid level reading of liquids that have a tendency to surge or boil. These gauges are highly effective in (1) Reducing the boiling effects of entrained gas being released under lowered pressure (2) The liquid itself being vaporised when pressure reaches a critical low point and (3) Boiling caused by temperature exceeding the boiling point of liquid. When the liquid being gauged has an unusually low boiling point, the gauge and valves should be insulated and the gauge equipped with non-frosting unit. Series L Chamber Gauges are of flat glass reflex or transparent design. The liquid chambers is constructed of heavy tubing, rustproofed and carefully slotted and machined to provide plain seats for the gaskets and glass assemblies.

A General Purpose Gauge for Mid-Range Pressure Temperature Applications

Standard construction includes a solid one-piece chamber machined from carbon steel with covers, toughened glass and chrome - molybdenum bolts and nuts.

All metal parts are rustproofed. Recessed gasket seat prevent movement and insure leak-free service.

Series-M gauges are also available in a wide variety of materials to meet specific corrosive or extreme temperature conditions. They are also available with illuminators, non-frosting shields, heating tubes and brackets.

A Heavy Duty Gauge for Safe, Dependable Service

Heavy-duty Series H Gauges are available in both reflex and transparent types. These Gauges are designed and manufactured to highest industrial standards. Their dependability under difficult operating conditions is well known in the process industries. Series H Gauges have a one-piece liquid chamber machined from solid bar steel. Interchangeable sectional gauges and cover glasses are tightly locked over the liquid chamber with special bolts and nuts. Recessed gasket seats have a fine finish to provide a positively leak proof seal between the chamber and glass. All metal surface inside and outside including threaded areas are rustproof.

SERIES L

PROCESS GAUGES

Large Chamber Gauges for easy level reading of boiling liquids

Series-L Large Chamber Gauges are designed to give an accurate liquid level reading of liquids that have a tendency to surge or boil.

These gauges are highly effective in:

- 1) Reducing the boiling effects of entrained gas being released under lowered pressure.
- 2) The liquid itself being vaporised when pressure reaches a critical low point.
- 3) Boiling caused by temperature exceeding the boiling point of liquid.

When the liquid being gauged has an unusually low boiling point the gauge and valves should be insulated and the gauge equipped with non-frosting unit. Large chamber gauges are of flat glass Reflex or Transparent design. The Liquid Chamber is constructed of heavy tubing, rustproofed and carefully slotted and machined to provide plain seats for the gaskets and glass assemblies.

Covers are steel secured with specially designed bolts.

Series: R-L (Reflex)

LENGTHS:

Series-L gauges are available in nine standard visible glass lengths. Multiple Windows on a single piece liquid chamber are used for longer lengths.

CONNECTIONS:

Standard Connections are 1/2" NPT or 3/4" NPT.

LIQUID CHAMBERS:

Heavy tubing gasket seats are machined on the face of the chamber and assembly torque are designed to prevent sidewise movement of gasket. Rustproofed.

COVERS:

Rustproofed steel.

SPECIAL MATERIALS:

Materials to suit NACE applications, other special materials available on request.

BOLTS & NUTS:

Chrome molybdenum alloy steel bolts heat treated for strength and rustproof to provide maximum corrosion resistance.

Series: T-L (Transparent)

TOUGHENED GLASS:

Toughened glass, resistant to thermal and mechanical shock. It is a tough, durable, moulded glass made under carefully controlled manufacturing techniques, in accordance with BS 3463, DIN 7081. Mica or plastic shields are recommended for transparent glasses when handling caustic, hydrofluoric acid or other media corrosive to glass.

GASKETS:

Die cut from highest quality material best suited for use with liquid indicated.

SERIES M

PROCESS GAUGES

A General Purpose Gauge for Mid-Range pressure temperature applications.

Series-M Liquid Gauges have been proven dependable and safe on thousands of installation.

Standard Construction includes a solid one- piece chamber machined from carbon steel with covers, toughened glass and chrome molybdenum bolts and nuts.

All metal parts are rustproofed. Recessed gasket seat prevent movement and insure leak-free service.

Series-M gauges are also available in a wide variety of materials to meet specific corrosive or extreme temperature conditions.

Series: R-M (Reflex)

Series: T-M (Transparent)

LENGTHS:

Series-M Gauges are available in nine standard visible glass lengths.

Multiple windows on a single piece liquid chamber are used for longer lengths.

CONNECTIONS:

Standard Connections are 1/2" NPT or 3/4" NPT.

LIQUID CHAMBERS:

Machined from solid bar stock of cold rolled carbon steel. Perfectly machined gasket seats prevent movement of gasket and insure leakproof performance. Rustproofed.

COVERS:

Rustproofed steel.

SPECIAL MATERIALS:

Materials to suit NACE applications, other special materials available on request.

BOLTS & NUTS:

Chrome molybdenum alloy steel bolts heat treated for strength and rustproofed to provide maximum corrosion resistance.

TOUGHENED GLASS:

Toughened glass, resistant to thermal and mechanical shock. It is a tough, durable, moulded glass made under carefully controlled manufacturing techniques, in accordance with BS 3463, DIN 7081. Mica or plastic shields are recommended for transparent glasses when handling caustic, hydrofluoric acid or other media corrosive to glass.

GASKETS:

SERIES H

PROCESS GAUGES

A Heavy Duty Gauge for safe, dependable service

Heavy-duty Series-H Gauges are available in both Reflex and Transparent types.

These Gauges are designed and manufactured to highest industrial standards. Their dependability under difficult operating conditions is well known in the process industries.

Series-H Gauges have a one-piece liquid chamber machined from solid bar steel. Interchangeable sectional gauges covers a glasses are tightly locked over the liquid chamber with special bolts and nuts.

Recessed gasket seats have a fine finish to provide a positively leak proof seal between the chamber and glass.

All metal surface inside and out, including threaded areas, are rustproofed.

Series: R-H (Reflex)

Series: T-H (Transparent)

LENGTHS:

Series-H Gauges are available in nine standard visible glass lengths.

Multiple windows on a single piece liquid chamber are used for longer lengths.

CONNECTIONS:

Standard Connections are 1/2" NPT or 3/4" NPT.

LIQUID CHAMBERS:

Machined from solid bar stock of cold rolled carbon steel. Perfectly machined gasket seats prevent movement of gasket and insure leakproof performance. Rustproofed.

COVERS:

Rustproofed steel.

SPECIAL MATERIALS:

Materials to suit NACE applications, other special materials available on request.

BOLTS & NUTS:

Chrome molybdenum alloy steel bolts heat treated for strength and rustproofed to provide maximum corrosion resistance.

TOUGHENED GLASS:

Toughened glass, resistant to thermal and mechanical shock. It is a tough, durable, moulded glass made under carefully controlled manufacturing techniques, in accordance with BS 3463, DIN 7081. Mica or plastic shields are recommended for transparent glasses when handling caustic, hydrofluoric acid or other media corrosive to glass.

GASKETS:

Die cut from highest quality material best suited for use with liquid indicated.

PRESSURE TEMPERATURE RATING

TUBULAR GAUGES U

TUBULAR GAUGES

Tubular Glass Gauges for low pressure process and boiler drum application.

Tubular Glass Level Gauges comprise a length of 19mm outside diameter drawn borosilicate glass tube fitted each end with an offset isolating valve to permit connection to a vessel.

The series 26 isolating valves have a specially designed gland assembly for positive sealing onto the glass tube without imposing stress.

Lengths: Any single glass up to and including 200mm vessel centres. Longer lengths available on request.

ISOLATING VALVE MATERIALS SERIES 26

VALVE BODY: Machined from carbon steel forging.

VALVE BONNET: Union type bonnet machined from carbon steel.

VALVE TRIM: Renewable seat, plug / spindle and ballcheck manufactured in 316 stainless steel.

HANDWHEEL/LEVER: Ductile iron.

PACKING: Spindle packing, multi ring non-asbestos compatible with service. Glass gland packing, rubber/PTFE.

CARBON STEEL PARTS: Are rustproofed to provide maximum corrosion resistance.

SPECIAL MATERIALS: Available to suit NACE specification MR-01-75 and/or specific liquid services.

Pressure rating: Maximum permitted working pressure varies with length - refer to table below:

Single Glass length (mm / inch)	Maximum working pressure for:	
	Temp upto 65°C / 149°F with no corrosion BARS / PSI	Steam boiler services upto 170°C / 338°F BARS / PSI
200 / 7.87	7 / 101.5	7 / 100
250 / 9.84	7 / 101.5	7 / 100
300 / 11.81	7 / 101.5	7 / 100
350 / 13.77	7 / 101.5	7 / 100
400 / 15.74	7 / 101.5	7 / 100
450 / 17.71	7 / 101.5	7 / 100
500 / 19.68	7 / 101.5	7 / 100
600 / 23.62	7 / 101.5	7 / 100

Gauges with glass lengths up to 600mm / 23.62 inch are suitable for Steam Boiler application when installed in accordance with the requirement of British Standard BS 759.

TUBULAR GAUGE VALVE

OPTIONAL FEATURES AND ACCESSORIES

Guard-Rod Protectors: Four (4) guard rods and holders to protect glass from mechanical shock is standard. Box type sheet metal protector is optional.

Safety Ballcheck: Valves can be furnished with a ballcheck for pressurized and vacuum service to provide positive isolation of liquid in the event of glass breakage.

WELD PAD WPM

PROCESS GAUGES

Flat Glass Liquid Level Gauges designed to become an Integral part of the vessel

Weld Pad Gauges are used where convectional gauge and valve construction is impractical, e.g. because of solid matter in suspension, when thermal error due to piping to a gauge glass can not be tolerated, or where space restrictions suggest their use.

They are available in most standard sizes, with both Reflex and Transparent glasses. Reflex glasses are used where liquid level reading is the only requirement. Transparent gauges are usually used where there is also a requirement to see into the vessel or, with gauges installed on each side, through the vessel (e.g. interface applications.)

Series: WPM (Flat Back)

Series: WPM (Radiused Back)

LENGTHS:

Weld pad Gauges are available in nine standard visible glass lengths. Longer lengths can be achieved either by having multiple windows on a single piece or having several overlapping individual gauges (giving continues visible length).

INSTALLATION:

The weld pad body is welded to the vessel after cutting a slot, or holes, in the vessel wall to match the slot in the gauge body.

PRESSURE LOADS:

Weld pad gauges will withstand loading due to the service pressure, but they are not designed to replace the vessel strength lost when the vessel wall is cut.

he vessel wall provides suitable vessel wall reinforcement to prevent distortion during cutting, installation and operation.

GAUGE BODY:

Machined from solid bar stock of cold rolled carbon steel rustproofed.

COVERS:

Rustproofed steels.

BOLTS & NUTS:

Chrome molybdenum alloy steel bolts heat treated for strength and rustproofed.

TOUGHENED GLASS:

Toughened glass, resistance to thermal and mechanical shock. It is tough, durable, moulded glass made under carefully controlled manufacturing techniques, in accordance with BS 3463, DIN 7081. Mica or plastic shields are recommended for transparent glasses when handling caustic, hydrofluoric acid or other media corrosive to glass.

GASKETS:

Die cut from highest quality material best suited for use with liquid indicated.

SPECIAL MATERIALS:

Materials to suit NACE applications, other special materials available on request.

All dimensions in millimeters.

All weights are in kilograms.

All information stated above is approximate and is given for Guidance only.

Support brackets are provided on all gauges consisting of 5 sections or more.

For visible length other than shown in the chart contact factory.

OPTIONAL ACCESSORIES

BLISS ANAND Supplies variety of accessories with Level Gauges, on request.

1. Illuminator:

Transparent level gauge are supplied with illuminator both explosion proof and weather proof.

2. Scales:

Metallic engraved scale can be supplied with desired graduation.

3. Support Brackets:

Support brackets are recommended when the overall gauge length exceeds 1.5 meters.

4. Heating jacket:

Heating jackets can be provided for process gauge both for reflex and transparent types.

H Type Transparent

M Type Reflex

5. Non-Frosting Shield:

Non-frosting Shields supplied for sub zero application for both reflex and transparent type level gauges.

GAUGE VALVE

VALVE OPTIONS

SERIES - '10'

100LBS@100 DEG F

BLISS ANAND 10-TU valves feature straight type body with integrated seat and Elastomer (EPDM) Glass tube packing bush, with integral seat and PTFE valve cone. These are primarily used for tubular type level gages for low pressure & temperature applications. They are equipped with mounting clamps to fit glass protection rods. They also features a ball check arrangement.

SERIES - '20'

2400 LBS @ 100°F, 1400 LBS @ 750°F

BLISS ANAND SERIES 20 valves features integrated of bonnet drop forged offset steel bodies, stainless steel trim with wide choice of connections. Their design incorporate ball check arrangements and union gauge connections. They are equipped with union gauge connections which permits simple installation and easy access to the ball check.

SERIES - '40'

4000 LBS @ 100°F, 1500 LBS @ 750°F

BLISS ANAND SERIES 40 valves are designed and built to the highest standard quality features such as regrindable and renewable seat and complete rust proofed carbon steel parts assuring long trouble free services union gauge connection enables gauges to be turned to any desired angle and removed of gauge without disturbing the valve which saves time in maintenance. Also the valve features union bonnet, and stem back seating.

SERIES - '80'

4000 LBS @ 100°F, 1500 LBS @ 750°F

BLISS ANAND SERIES 80 valves are designed with bolted bonnet construction. Valves are equipped with stainless steel ball checks, stem back seating and offset construction. Union gauges connections is optional.

STANDARD FEATURES

SOFT SEAT VALVE CONE:

The valve features a soft seating valve cone in PTFE capped at the stem tip. This ensures zero leak when closed

STRAIGHT BODY PATTERN:

The valve features a straight body pattern

Standard Connections:

- Vessel : 3/4" NPT male
- Drain : 3/4" NPT female
- Gauge : 3/8" NPT female

Optional Connections:

- Vessel : 1/2" NPT male
- Vent & Drain : 1/4" NPT plugged

Safety Shut OFF:

Valves are provided with stainless steel ball check which instantaneously shuts off flow of the medium being gauged in the event of glass breakage

13	HAND WHEEL NUT	STEEL

STANDARD FEATURES

BACKSEATING STEM:

When the valve is opened to its limit, the stem seats against the bonnet allowing the valve to be repacked while under pressure.

STRAIGHT BODY PATTERN:

The straight body is of a straight forward angle pattern, with the gauge, drain and vessel connections on intersecting centrelines.

OFFSET BODY PATTERN:

The Offset body is an angle pattern valve, with the centreline of the gauge and drain connections offset 22mm from the centreline of the vessel connections, Hence by removing the vent/Drain plugs, the interior of a top and bottom connected gauge glass may be cleaned without removing the gauge.

UNION GAUGE CONNECTION:

Both the straight and the offset can be furnished with a union gauge connection which allows a top and bottom connected gauge to be turned to any desired angle for convenient visibility. It also makes possible the removal of the gauge without removing the valves, a feature which saves time when the gauges must be cleaned or serviced.

Optional Connections:

Vessel : 1/2" NPT male or 3/4" NPT male for socket weld or flanged to suit requirements. Series 20 valves can be supplied with ANSI 150, 300 or 600 integral flanges.

Gauges : On union connected valves 1/2" NPTmale or 3/4" NPT male. On all valves 3/4" NPT female screwed and 1/2" or 3/4" female socket weld recess.

Vent/Drain : 3/4" NPT female screwed and 1/2" or 3/4" female socket weld recess. vent & drain valves on request.

Connections are also available screwed.

Safety Shut Off:

Valves may be provided with stainless steel ballcheck which instantaneously shuts off flow of the medium being gauged in the event of glass breakage. The ball operates upstream from the seat and can be furnished for vacuum seating if required.

14	HAND WHEEL	WCB
15	NAME PLATE	SS-304
16	HAND WHEEL NUT	STEEL

STANDARD FEATURES

BACKSEATING STEM:

When the valve is opened to its limit, the stem seats against the bonnet allowing the valve to be repacked while under pressure.

STRAIGHT BODY PATTERN:

The straight body is of a straight forward angle pattern, with the gauge, drain and vessel connections on intersecting centrelines.

OFFSET BODY PATTERN:

The Offset body is an angle pattern valve, with the centreline of the gauge and drain connections offset 22mm from the centreline of the vessel connections, Hence by removing the vent/Drain plugs, the interior of a top and bottom connected gauge glass may be cleaned without removing the gauge.

UNION GAUGE CONNECTION:

Both the straight and the offset can be furnished with a union gauge connection which allows a top and bottom connected gauge to be turned to any desired angle for convenient visibility. It also makes possible the removal of the gauge without removing the valves, a feature which saves time when the gauges must be cleaned or serviced.

Standard Connections:

- Vessel** : 3/4" NPT male
- Drain** : 1/2" NPT female
- Gauge** : 1/2" NPT female

Optional Connections:

- Vessel** : 1/2" NPT male or 3/4" NPT male for socket weld or flanged to suit requirements. Series 40 valves can be supplied with ANSI 150, 300 or 600 integral flanges.
- Gauges** : On union connected valves 1/2" NPT male or 3/4" NPT male. On all valves 3/4" NPT female screwed and 1/2" or 3/4" female socket weld recess.
- Vent/Drain:** 3/4" NPT female screwed and 1/2" or 3/4" female socket weld recess. vent & drain valves on request.

Connections are also available screwed.

Safety Shut Off:

Valves may be provided with stainless steel ballcheck which instantaneously shuts off flow of the medium being gauged in the event of glass breakage. The ball operates upstream from the seat and can be furnished for vacuum seating if required.

SERIES 80

GAUGE VALVES

Gauge Valves With Bolted and Bonnet & Inside Screw, Designed to Reduce Threaded Connections.

These rugged valves are designed and manufactured for use with flat glass gauges, instruments piping and other applications.

Pressure Rating per intermediate rating ANSI 1250

83 STRAIGHT PATTERN WITH FEMALE NPT GAUGE CONNECTION, MALE VESSEL CONNECTION ON SOLID SHANK

84 STRAIGHT PATTERN WITH FEMALE NPT UNION GAUGE CONNECTION, MALE VESSEL CONNECTION ON SOLID SHANK

GAUGE VALVES

Gauge Valves With Bolted and Bonnet & Inside Screw, Designed to Reduce Threaded Connections.

These rugged valves are designed and manufactured for use with flat glass gauges, instruments piping and other applications.

Pressure Rating per intermediate rating ANSI 1250

86 OFFSET PATTERN WITH FEMALE NPT GAUGE CONNECTION, MALE UNION VESSEL CONNECTION

87 OFFSET PATTERN WITH FEMALE NPT UNION GAUGE CONNECTION, MALE UNION VESSEL CONNECTION
